

civfix Gov Systems

A public movement combined with software that helps cities close the loop on resident reports.

Investor deck | October 2026

Nobody knows who fixed the pothole

3.1

★★★☆☆

average App Store rating across 75 city 311 apps.

LA ★ 1.5 | SF ★ 1.0 | Grand Rapids ★ 2.1 | Philly ★ 2.2 | Chicago ★ 2.5

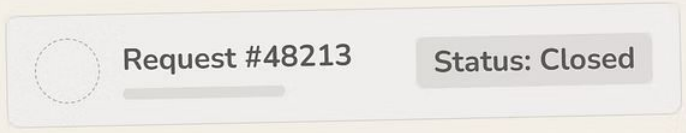

~2%

of U.S. cities and towns have a 311 system (about 400 of 19,000+).

How it works today

What residents see

A web form, a ticket number, and a "closed" status with no name, no photo, and no sense that a person was involved.

What city crews get

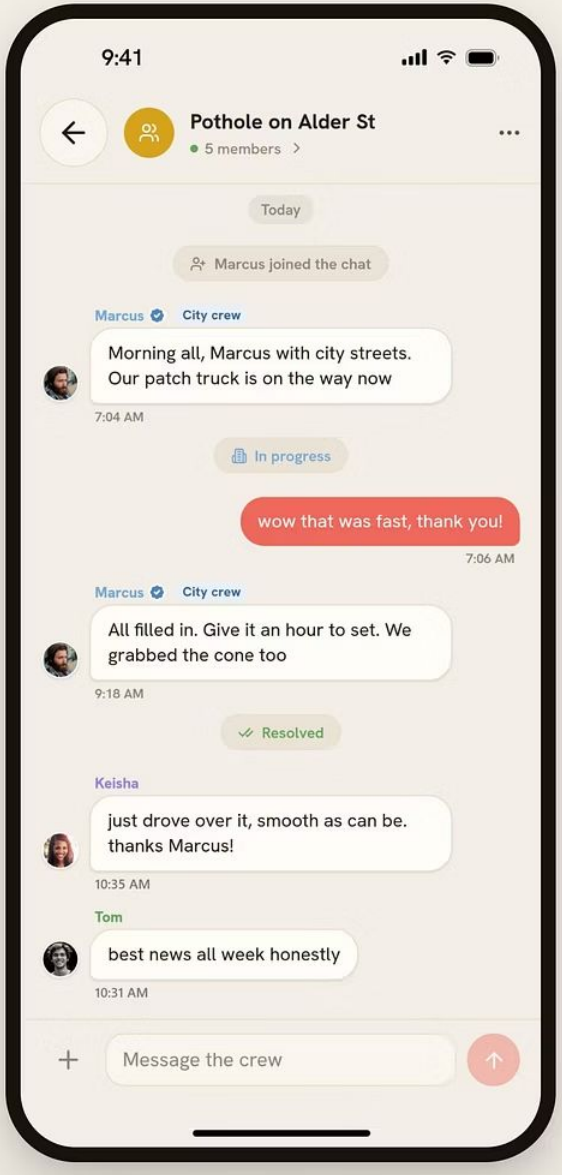

Calls when something breaks, and silence when they fix it.

38%

When state and local workers were asked what would help keep staff, 38% said more appreciation and recognition (2021).

In Wilmington, NC, residents choose between 15 separate web forms.

Government Technology 2023; Apple App Store, Oct 2026; Census of Governments 2022; MissionSquare Research Institute 2021.

Meet Marcus. He fixed the pothole.

civfix humanizes the reporting process on both sides.

Residents trust people, not ticket numbers.
When Boston sent residents photos of city workers handling their reports, those residents filed about 60% more requests over the next 13 months.

City crews get the thanks they earn.
Crews can put their name on the fixes they choose, and the neighborhood sees who showed up. The thank-you reaches the person who did the work.

The gap between a city and its residents gets smaller.
One report becomes a conversation with the crew, the reporter, and the neighbors who drive over the same road.

Buell, Porter & Norton, Harvard Business School, Manufacturing & Service Operations Management, 2020.

Where city crews lose time

From conversations with public works managers, city employees, and political advisers. We continue to conduct research, shadow teams, and have as many of these conversations as possible. It is our biggest near-term priority.

We noticed only

35%

of workers' time was spent actually implementing fixes

Agentic workflows can automate

90%

of manual triaging and routing tasks

City side

Manual triaging and suboptimal routing

Triaging: staff read each report, judge its urgency, and merge duplicates by hand.

Routing: manual, arbitrary designation of work queue for each crew; sorrowfully unoptimized.

ON CIVFIX

Reports are deduplicated and prioritized before anyone on staff sees them.

JIT routing system dynamically disperses crews with optimal routes to minimize travel, reconnoiter, and down time.

Downtime around events and NGO coordination

Crews wait on calls, emails, and site visits to line up cleanups and volunteer events with city work.

ON CIVFIX

Nonprofit requests for crews, materials, and pickups arrive in the same queue the crew already works from.

No motivation or recognition

Nobody knows who fixed the pothole. The work is invisible to residents and to the crew's own city.

ON CIVFIX

Every fix is credited to a named crew in a public feed residents can follow and thank.

Nonprofit side

No channel to find and fix issues with the city

Volunteers spot problems on every cleanup. Getting them to the right office means a phone line or someone's personal contact.

On civfix: reports from organizations land with the right crew and are tracked to resolution.

No way to request services

Materials, crews, and trash pickup for events are arranged by email, if at all.

On civfix: service requests in the app, routed like any report.

Volunteer work goes unrecorded

Hours and fixes live in spreadsheets, so neither the city nor the volunteer gets credit.

On civfix: verified volunteer hours, including for every report filed.

Observed while shadowing crews and talking with public works managers in Los Angeles, Cologne, and Burlington, VT.

civfix

WHAT IS CIVFIX

The global volunteer hub.

One app that bridges the gap between people and their government, and gives every neighborhood the tools to fix itself.

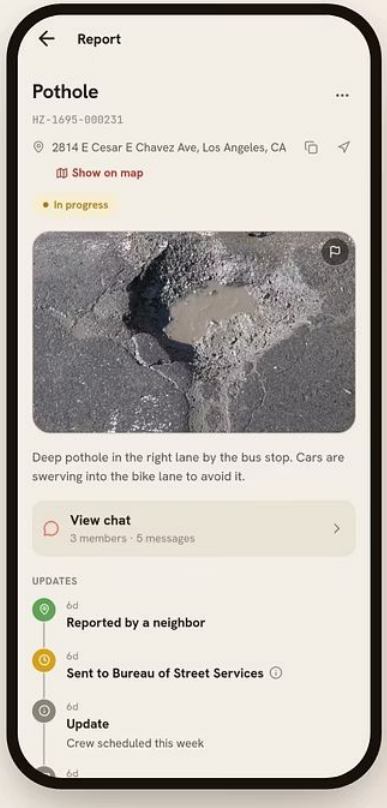

Residents ↔ civfix ↔ City agencies

1 Request 311 services
Snap it, pin it. Routed to the right city agency and tracked to resolved.

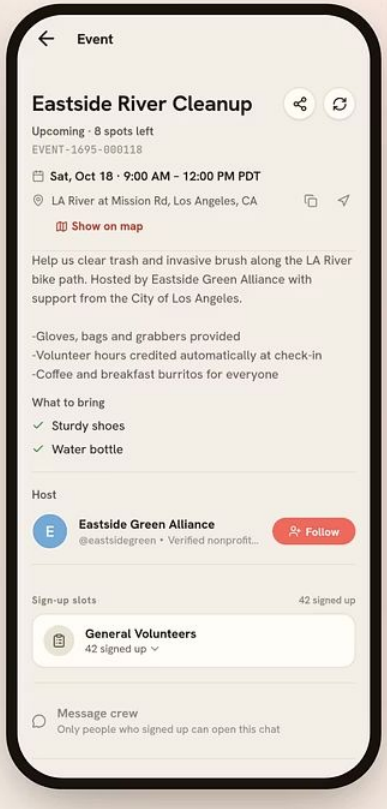

2 Host volunteer cleanups
RSVPs, shifts, waitlists and QR check-in, built in.

3 NGOs host on civfix
Verified organizations run their events, teams and volunteers.

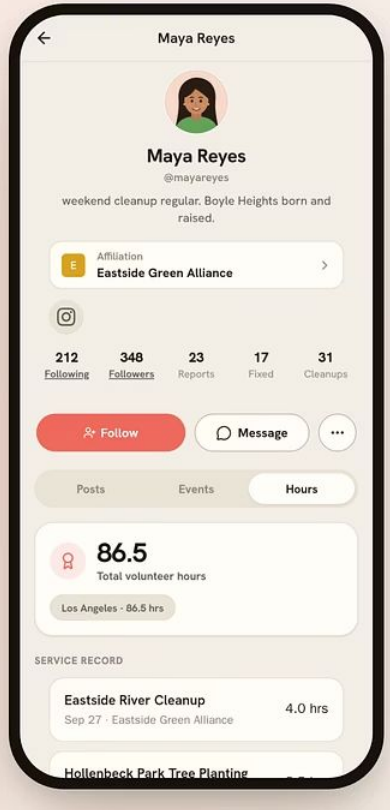

4 Track volunteer hours
Earned per event, plus 0.1 hrs for every report, with verifiable service records.

Report to the city
Routed to the right city agency

Rally volunteers
Sign-ups, shifts and check-in

Earn verified hours
Every event, plus 0.1 hrs per report

App screens shown with sample data. Pothole photo: public domain, Wikimedia Commons.

Every nonprofit that joins brings its volunteers with it

We grow city by city through the organizations already doing the work there.

PHILADELPHIA, PARTNERSHIPS SIGNED

50,000+

followers across partner organizations

Their members are our first volunteers and reporters in the city. Signing more Philadelphia organizations is our biggest mission over the next month.

Our community show asks residents whether the city fixed it. It keeps going, and every episode points viewers to a cleanup they can join.

Nonprofit → City

Volunteers, events, and reports. People who clean a river on Saturday also report the pothole on the way there, and every report earns volunteer hours.

City → Nonprofit

Materials, crews, and trash pickup for their events, requested through the same app residents use to report.

Why this scales globally

- Nonprofits exist in every city and partner with us before city hall signs anything
- Each partner vouches for the next. No ad spend, no cold downloads
- By the time we pitch a city, its residents are already reporting

How the two organizations fit together

The nonprofit gets residents reporting. The company only earns more when they do.

REACH OUT LA, CALIFORNIA 501(C)(3)

Gets the community engaged

Runs the free civfix resident app. Its success is our credibility: a humanized, community-first 311 stimulates community work, which is why cities choose civfix.

PUBLIC REPORT FEED

More residents report, more reports get resolved

Every report is public, tracked from submission through resolution, so the city can check the numbers itself.

CIVFIX GOV SYSTEMS INC., DELAWARE C-CORP

Earns the engagement bonus

Sells staff-side software to city governments and arrives with a proven way to get the community engaged. Paid more when the milestones hit.

A written license covers the nonprofit's use of the civfix name. Reach Out LA advises on the legal structure.

Why the nonprofit comes first

No engaged residents, no reports, no bonus. The community work is the business model.

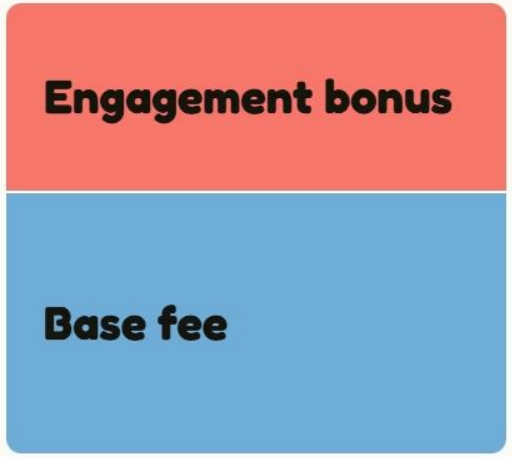

Long-term goal

Become the primary 311 app in America and Europe, kickstarting R&D for the next generation of civic tech.

We only earn more when residents show up

Flat-fee 311 vendors get paid the same whether anyone uses the app. Our contracts are built around engagement.

How a city pays

Ceiling the city approves in advance

Earned when unique residents reporting and reports tracked through resolution hit milestones the city sets up front.

Lower than any incumbent. Competitors run $5,000 to $35,000 a year.

[range TBD]

Every report is public, so the city can check the numbers itself.

Who we sell to, in order

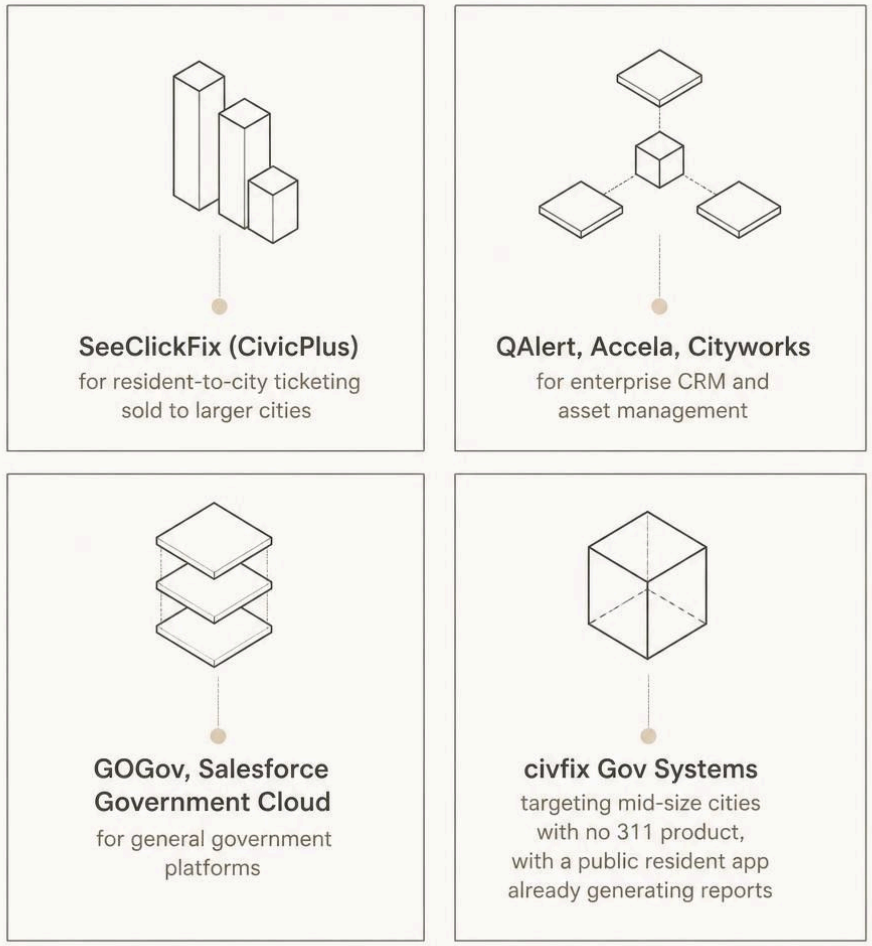

1. **Cities with no 311 app**
   Residents report by phone and scattered web forms. No incumbent to displace.
2. **Cities that dropped a vendor**
   Contracts cancelled for low usage. Our model solves the problem that ended the last one.
3. **Competitor cities at renewal**
   One-year auto-renewals with a 60-day notice window and 5% annual increases. We show up three months before the date.
4. **German cities, through founder connections**
   Warm introductions open a second market. Same engagement contract, in euros.

Why we can price this way

- Three founders in a small NYC apartment, on grocery-money salaries for the first year
- Lean, self-hosted tech stack
- Smaller sales team, no legacy systems to carry

750+ US cities above 50,000 people.

Competition

SeeClickFix (CivicPlus)

Resident-to-city ticketing, sold to larger cities

QAlert, Accela, Cityworks

Enterprise CRM and asset management

GOGov, Salesforce Government Cloud

General government platforms

Where we fit

Any city (targeting mid-sized), with or without a 311 vendor. Incumbents collect reports; civfix generates them, through named city crews, a community feed, and volunteers already on the app. AI sorts and routes reports before a person sees them, so staff spend less time on data entry and nobody loses a job.

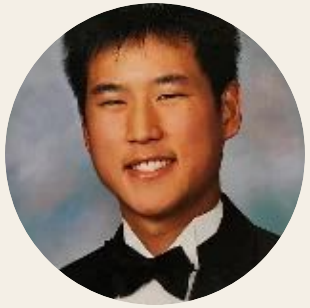

Team

Roman Aytur, CEO

Founder and President of Reach Out LA, the nonprofit that built and runs civfix, where he leads fundraising and a team of student volunteers. Ambassador and contributor to the rewrite of the Los Angeles City Charter. Worked on Matt Mahan's campaign for governor. Has led community research projects and built programs for large nonprofits. Winner of multiple public speaking awards.

romanaytur@gmail.com

Theo Bong, CPO

Physics undergraduate student at University of California, Berkeley. Six years background in programming, design, and systems admin. Deep interest in solving the hard problems intersecting tech and society. Focused on software design and user experience.

theo@bongbong.com

Rudra Patel, CTO

Computer science undergraduate student at the University of Kentucky on a full-ride academic scholarship. Seven years experience in programming, systems admin, robotics. SWE internship experience. Runs infrastructure, backend, and DevOps.

rudra@byteful.me

Technical Edge (and Ethos)

- Fully self-hosted, non-proprietary infrastructure; paying for no managed services
- Scrappy, hacker-mentality engineering and systems administration; massively undercut corporate competitors with state of the art agentic workflows, inspired UX vision, infrastructure cost/efficiency, and time-to-market on innovations.
- FOSS software licensing (Bazaar model); AGPLv3 licensed
- Earnest passion for attempting the hard, novel problems that are a complexion of engineering, art, society, and culture.
- Technical co-founders (Rudra & Theo) have experience developing, maintaining, and supporting a video-game B2B SaaS product together since March 2025 (200+ servers, 100K+ players). Additionally published and maintained numerous FOSS projects amassing 60K+ downloads.

The ask

$250,000

Post-money SAFE. Twelve months of runway. Tier 1 cities by train, every other city pitch and onboarding visit on a basic economy flight.

Where it goes

- **Go-to-market** $70,000
  Pilots, onboarding, city-facing materials
- **City pitches and onboarding travel** $50,000
- **Legal, insurance, and SOC 2** $45,000
- **Office and studio, 12 months** $40,000
- **Founder living costs** $15,000
  Founders take almost no salary in year one
- **Reserve** $30,000

What it buys in twelve months

NOW TO SPRING

Pitch Tier 1 cities before budgets close

Yonkers, Erie, Flint, Amarillo, Wilmington, High Point, Monroe, Lawrence. Product fully working.

JULY 1, NEW CITY FISCAL YEAR

5 cities signed and in their budgets

One contract covers everything except living costs. The other four are margin.

FINAL SIX MONTHS

10+ cities, shifting to competitor renewals

Show up three months before each renewal date with five live cities as references.
